

Fluoropolymer Color Concentrates for Extrusion Applications

STANDARD
COLORS
AVAILABLE

CCG is now producing its own custom color concentrate additives for fluoropolymer extrusion processes. With an initial focus on fluoropolymers and high operating temperature resins, CCG's unique production capabilities can support small volume production requirements with REACH/RoHS compliant color additives.

MATERIALS AVAILABLE

- FEP
- PFA
- PVDF
- ETFE

Colors Available :
White, Green, Brown, Orange, Blue, Black, Red, Yellow

CCG's expertise in processing activated the commercialization of color concentrate formulations with compatibility and miscibility in mind. CCG can provide color chips in any of the listed fluoropolymers and any grade, including proprietary compounds and formulations. By enabling the use of specific grades and even lots of material, CCG's color additives minimize process variability and production variables helping to regain line speed and efficiencies.

INCREASED COMPATIBILITY AND PROCESSIBILITY

CCG's proprietary process enables pigmentation with no use of heavy metals, ensuring that ALL color gradients are REACH and RoHS compliant.
